1 Introduction?

2 Description

Sushi++ is a mostly functional language, enhanced with a few features belonging to the imperative paradigm.

2.1 Features

Here is our list of features presented in a decreasing order of priority:

1. Closure: a function will be able to capture a variable or a function from the scope of a higher function.
2. Delimiter of end of line: `\n (...)`
3. Full type inference:
4. Usage of language C to use a few function:
5. Simple garbage collector:
6. Packages:
